

ConnectionsIT Expands Video Surveillance System Integration Expertise into the Education Sector

The need to provide safe and secure educational facilities for our children and educators has become a number one priority across America. Colleges, Universities and School Districts are investing billions of dollars annually to create safe zones within their campuses to prevent the type of emergency situations that we all have witnessed over the past several years.

The educational community is turning to system integrators such as Brody Carlson, President of ConnectionsIT, to work with their internal security departments to create reliable and cost effective video surveillance, access control and alarm systems. It is the role of the system integrator to filter through the thousands of security products and services on the market today and to select those that meet the individual system needs of each campus and security situation.

ConnectionsIT already has a solid business reputation in the gaming sector for assisting Indian Nation casinos in building and maintaining advanced video surveillance solutions. ConnectionsIT works with all types of tier-one alarm, access control and video surveillance product and service companies to create the right security solution for a particular business environment.

Aside from its gaming security expertise, ConnectionsIT has a proven track record for the design and implementation of IP telephony systems, Medical Record systems, Citrix Server, supporting Microsoft servers and workstations, and Cisco network engineering.

Today's video surveillance, monitoring, storage and management systems are very complex and must be integrated into the overall security network of any security operation. These systems must be reliable, easy to operate, and have a diagnostic capability to prevent system failure and product outages. The security systems also must meet the operating standards of the various governing educational boards and committees.

ConnectionsIT has offices in California, Nevada and Oklahoma, and

is expanding its service locations to include Las Vegas and Minnesota. ConnectionsIT has an experienced staff of 30 professionals who are solution partner certified and capable of handling any type of video surveillance or IP challenge.

ConnectionsIT Founder and President Brody Carlson has 10 years of front-line system integration experience in trouble-shooting and repairing existing video surveillance systems. Brody has a degree in criminal justice and served in the Marine Corps for 10 years as a tactical officer in an air defense unit. Brody also volunteers as a Reserve Police Officer. He is certified as a MSCE, CSE, CCA and CCSP.
